

一、填空题

(1) 设 $y = \cos^2 x$, 则 $dy = (-\sin 2x dx)$;

(2) 曲线 $y = \frac{x}{1+x^2}$ 的渐近线为 ($y = 0$);

$$k = \lim_{x \rightarrow \infty} \frac{y}{x} = \lim_{x \rightarrow \infty} \frac{1}{1+x^2} = 0, b = \lim_{x \rightarrow \infty} (y - kx) = \lim_{x \rightarrow \infty} \frac{x}{1+x^2} = 0,$$

(3) 设函数 $f(x) = a \sin x + \frac{1}{3} \sin 3x$ 在 $x = \frac{\pi}{3}$ 处取得极值, 则常数 $a = (2)$;

$$f'(x) = a \cos x + \cos 3x, f'(\frac{\pi}{3}) = a \cos \frac{\pi}{3} + \cos \pi = \frac{a}{2} - 1 = 0$$

(4) 函数 $f(x) = \frac{1}{3+x}$ 展开成 x 的幂级数是 ($\sum_{n=0}^{\infty} \frac{(-1)^n}{3^{n+1}} x^n, -3 < x < 3$);

(5) 设 $f(x)$ 是连续函数, 且 $f(x) = \sin x + \int_0^{\pi} f(x) dx$, 则 $f(x) = (\sin x + \frac{2}{1-\pi})$

$$\text{设 } c = \int_0^{\pi} f(x) dx, \quad c = \int_0^{\pi} (\sin x + c) dx = -\cos x \Big|_0^{\pi} + c\pi = 2 + c\pi$$

二、计算下列极限

(1) 解 $\lim_{x \rightarrow 0} \frac{x^2 - 1}{x^2 + 1} = -1$

(2) 解 $\lim_{x \rightarrow 5} \frac{1 - \sqrt{x-4}}{x-5} = \lim_{x \rightarrow 5} \frac{-\frac{1}{2}(x-4)^{-\frac{1}{2}}}{1} = -\frac{1}{2}$

(3) 解 $\because \lim_{x \rightarrow 0^+} x \ln x = \lim_{x \rightarrow 0^+} \frac{\ln x}{\frac{1}{x}} = \lim_{x \rightarrow 0^+} \frac{\frac{1}{x}}{-\frac{1}{x^2}} = \lim_{x \rightarrow 0^+} (-x) = 0$

$$\therefore \lim_{x \rightarrow 0^+} x^x = \lim_{x \rightarrow 0^+} e^{x \ln x} = e^0 = 1$$

$$\begin{aligned}
 (4) \text{ 解 } \lim_{x \rightarrow 0} \frac{\int_{\cos x}^1 e^{-t^2} dt}{\left(\int_0^x e^{t^2} dt\right)^2} &= \lim_{x \rightarrow 0} \frac{e^{-\cos^2 x} \sin x}{2e^{x^2} \int_0^x e^{t^2} dt} = \lim_{x \rightarrow 0} \frac{e^{-1} \sin x}{2 \int_0^x e^{t^2} dt} \\
 &= \lim_{x \rightarrow 0} \frac{e^{-1} \cos x}{2e^{2x^2}} = \frac{1}{2e}
 \end{aligned}$$

三、求下列积分

$$(1) \text{ 解 } \int (e^x + x^3) dx = \int e^x dx + \int x^3 dx = e^x + \frac{1}{4}x^4 + C$$

$$\begin{aligned}
 (2) \text{ 解 } \int x \sin 2x dx &= -\frac{1}{2} \int x d \cos 2x = -\frac{1}{2} x \cos 2x + \frac{1}{2} \int \cos 2x dx \\
 &= -\frac{1}{2} x \cos 2x + \frac{1}{4} \sin 2x + C
 \end{aligned}$$

$$\begin{aligned}
 (3) \text{ 解 } \int_0^2 \max\{1, x^2\} dx &= \int_0^1 1 dx + \int_1^2 x^2 dx \\
 &= 1 + \frac{1}{3} x^3 \Big|_1^2 = 1 + \frac{7}{3} = \frac{10}{3}
 \end{aligned}$$

$$(4) \text{ 解 } \text{ 令 } x = \sin t, \text{ 则 } \int_0^{\frac{1}{2}} \frac{dx}{\sqrt{(1-x^2)^3}} = \int_0^{\frac{\pi}{6}} \sec^2 t dt = \tan t \Big|_0^{\frac{\pi}{6}} = \frac{\sqrt{3}}{3}$$

四、判断下列广义积分的敛散性；若收敛，则求其值

$$\begin{aligned}
 (1) \text{ 解 } \because \int_0^A x e^{-x} dx &= -x e^{-x} \Big|_0^A + \int_0^A e^{-x} dx \\
 &= -A e^{-A} - e^{-x} \Big|_0^A = -A e^{-A} - e^{-A} + 1, \text{ 且 } \lim_{A \rightarrow +\infty} (-A e^{-A} - e^{-A} + 1) = 1
 \end{aligned}$$

$$\therefore \text{ 广义积分 } \int_0^{+\infty} x e^{-x} dx \text{ 收敛, 且 } \int_0^{+\infty} x e^{-x} dx = 1$$

$$(2) \text{ 解 } \because \int_1^{5-\varepsilon} \frac{1}{\sqrt{5-x}} dx = -2\sqrt{5-x} \Big|_1^{5-\varepsilon} = 2(2 - \sqrt{\varepsilon}),$$

$$\text{且 } \lim_{\varepsilon \rightarrow 0^+} 2(2 - \sqrt{\varepsilon}) = 4$$

$$\therefore \text{广义积分 } \int_1^5 \frac{1}{\sqrt{5-x}} dx \text{ 收敛, 且 } \int_1^5 \frac{1}{\sqrt{5-x}} dx = 4$$

五、判别下列级数的敛散性, 并说明理由

$$(1) \text{ 解 } \because \lim_{n \rightarrow \infty} \sqrt{\frac{n}{n+1}} = 1 \neq 0 \quad \therefore \sum_{n=1}^{\infty} \sqrt{\frac{n}{n+1}} \text{ 发散}$$

$$(2) \text{ 解 } \because \lim_{x \rightarrow \infty} \frac{1 - \cos \frac{1}{n}}{\frac{1}{n^2}} = \frac{1}{2}, \text{ 且 } \sum_{n=1}^{\infty} \frac{1}{n^2} \text{ 收敛} \therefore \sum_{n=1}^{\infty} \left(1 - \cos \frac{1}{n}\right) \text{ 收敛}$$

$$(3) \text{ 解 } \because \lim_{n \rightarrow \infty} \frac{u_{n+1}}{u_n} = \lim_{n \rightarrow \infty} \frac{3^{n+1} \cdot (n+1)! n^n}{(n+1)^{n+1} 3^n \cdot n!} = \lim_{n \rightarrow \infty} \frac{3}{\left(1 + \frac{1}{n}\right)^n} = \frac{3}{e} > 1 \therefore \sum_{n=1}^{\infty} \frac{3^n \cdot n!}{n^n} \text{ 发散}$$

$$(4) \text{ 解 } \because \frac{1}{\ln(n+1)} > \frac{1}{\ln(n+2)}, \text{ 且 } \lim_{n \rightarrow \infty} \frac{1}{\ln(n+1)} = 0 \therefore \sum_{n=1}^{\infty} \frac{(-1)^n}{\ln(n+1)} \text{ 收敛.}$$

六、求函数 $y = 2x^3 - 3x^2$ 在区间 $[-1, 4]$ 上的最大值和最小值.

$$\text{解 } \because f'(x) = 6x^2 - 6x \therefore \text{令 } f'(x) = 0, \text{ 得 } (-1, 4) \text{ 内的驻点: } x_1 = 0, x_2 = 1$$

$$\text{又 } \because f(0) = 0, f(1) = -1, f(-1) = -5, f(4) = 80$$

$$\therefore \text{所求的最大值为 } f(4) = 80, \text{ 最小值为 } f(-1) = -5$$

七、设 D 是由直线 $x + y - 1 = 0$ 与抛物线 $y = 1 - x^2$ 所围成的平面图形, 求 (1) D 的面积;

(2) D 绕 x 轴旋转所产生的旋转体体积.

$$\text{解: 求交点 } y = 1 - x^2 = 1 - x, \text{ 得 } x_1 = 0, x_2 = 1,$$

交点 $(0, 1), (1, 0)$

(1) D 的面积

$$A = \int_0^1 (1 - x^2 - 1 + x) dx = \int_0^1 (x - x^2) dx$$

$$= \left(\frac{1}{2} x^2 - \frac{1}{3} x^3 \right) \Big|_0^1 = \frac{1}{6}$$

$$(2) \text{ 所求的旋转体体积 } V = \pi \int_0^1 (1 - x^2)^2 dx - \pi \int_0^1 (1 - x)^2 dx$$

$$= \pi \int_0^1 (x^4 - 3x^2 + 2x) dx = \pi \left(\frac{1}{5} x^5 - x^3 + x^2 \right) \Big|_0^1 = \frac{\pi}{5}$$

八、求幂级数 $\sum_{n=1}^{\infty} nx^{n+1}$ 的收敛域及和函数；并求数项级数 $\sum_{n=1}^{\infty} \frac{n}{6^n}$ 的和。

解 $\rho = \lim_{n \rightarrow \infty} \frac{a_{n+1}}{a_n} = \lim_{n \rightarrow \infty} \frac{n+1}{n} = 1$ ，而 $\sum_{n=1}^{\infty} n$ ， $\sum_{n=1}^{\infty} n(-1)^{n+1}$ 发散 收敛域为 $(-1, 1)$

当 $-1 < x < 1$ 时， $\sum_{n=1}^{\infty} nx^{n+1} = x^2 \sum_{n=1}^{\infty} nx^{n-1}$

$$= x^2 \sum_{n=1}^{\infty} (x^n)' = x^2 \left(\sum_{n=1}^{\infty} x^n \right)' = x^2 \left(\frac{x}{1-x} \right)' = \frac{x^2}{(1-x)^2}$$

因此 $\sum_{n=1}^{\infty} \frac{n}{6^n} = 6 \sum_{n=1}^{\infty} \frac{n}{6^{n+1}} = 6 \sum_{n=1}^{\infty} nx^{n+1} \Big|_{x=\frac{1}{6}} = \frac{6x^2}{(1-x)^2} \Big|_{x=\frac{1}{6}} = \frac{6}{25}$

九、设 $f(x)$ 连续， $\varphi(x) = \int_0^1 f(xt)dt$ ，且 $\lim_{x \rightarrow 0} \frac{f(x)}{x} = A$ (A 为常数)。求 $\varphi'(x)$ ，并讨论

$\varphi'(x)$ 在 $x=0$ 处的连续性。

解 $f(x)$ 连续，且 $\lim_{x \rightarrow 0} \frac{f(x)}{x} = A$ ， $f(0) = \lim_{x \rightarrow 0} f(x) = \lim_{x \rightarrow 0} x \cdot \frac{f(x)}{x} = 0$

$$\Rightarrow \varphi(0) = \int_0^1 f(0)dt = 0$$

$$\text{又} \because \text{当 } x \neq 0 \text{ 时, } \varphi(x) = \int_0^1 f(xt)dt = \frac{1}{x} \int_0^x f(u)du$$

$$\therefore \text{当 } x \neq 0 \text{ 时, } \varphi'(x) = \left(\frac{1}{x} \int_0^x f(u)du \right)' = \frac{xf(x) - \int_0^x f(u)du}{x^2}$$

$$\text{另外, 当 } x=0 \text{ 时, } \varphi'(0) = \lim_{x \rightarrow 0} \frac{\varphi(x) - \varphi(0)}{x} = \lim_{x \rightarrow 0} \frac{\int_0^x f(u)du}{x^2} = \lim_{x \rightarrow 0} \frac{f(x)}{2x} = \frac{A}{2}$$

$$\begin{aligned} 2) \because \lim_{x \rightarrow 0} \varphi'(x) &= \lim_{x \rightarrow 0} \frac{xf(x) - \int_0^x f(u)du}{x^2} = \lim_{x \rightarrow 0} \frac{f(x)}{x} - \lim_{x \rightarrow 0} \frac{\int_0^x f(u)du}{x^2} \\ &= A - \lim_{x \rightarrow 0} \frac{f(x)}{2x} = \frac{A}{2} = \varphi'(0) \quad \therefore \varphi'(x) \text{ 在 } x=0 \text{ 处连续.} \end{aligned}$$
